The Arthritis Foundation developed WWE as a group walking program to encourage people with arthritis to start walking and stay active. A self-directed version of the program is also available. WWE is designed to be a safe, relaxing, and enjoyable way for people to develop and sustain a personal plan to make walking part of their physical activity regimen. Encourage your patients to sign up at a location nearby or to use the self-directed version.

**Who is it for?**
- WWE is for people with arthritis who want to increase their physical activity levels and are able to be on their feet for at least 10 minutes without increased pain.
- The program may also benefit people with other health conditions that limit their mobility.
- People who use assistive devices can participate in the program.

**How is it conducted?**
- The 6-week instructor-led program meets three times a week in groups of up to 15. Each session includes a health education discussion, warm-up and cool-down exercises, and a 10–35 minute walk.
- Participants receive WWE educational materials and tools to supplement the group classes.
- Optional online support tools include video instruction, a message board, and an automated e-mail service alerting participants when milestones are reached.
- Topics covered in the group discussions and educational materials include pain management, stretching and strengthening to support the walking program, monitoring for problems, overcoming barriers to exercise, and staying motivated.
- Participants may also use the educational materials to follow the WWE curriculum on their own.

**What are the qualifications of the instructors?**
- One or two leaders supervise each group discussion and walking session.
- WWE program leaders must complete a 3–4 hour online training workshop from the Arthritis Foundation.
- Leaders are required to have CPR certification; first aid certification is recommended.

**What are the benefits?**
- A CDC-funded randomized clinical trial found that both the group and self-directed versions of WWE can help people:
  - Reduce arthritis symptoms such as pain, stiffness, and fatigue
  - Improve strength, balance, and walking pace
  - Reduce disability
  - Feel more confident they can manage arthritis
- No safety concerns have been reported in the literature.
Summary of the Evidence

<table>
<thead>
<tr>
<th>Author, Year</th>
<th>Design</th>
<th>Participants</th>
<th>Outcomes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Callahan LF, Shreffler J, Altpeter M, et al. (2011)</td>
<td>Quasi-experimental pretest-posttest evaluation of group and self-directed formats Performance and self-reported outcomes at baseline and 6 weeks Self-reported outcomes at 1 year</td>
<td>468 participants from urban and rural communities</td>
<td>No difference in group vs. self-directed formats at 6 weeks: ↓ pain, stiffness, fatigue ↓ disability ↑ strength, balance, walking pace ↑ confidence in ability to manage arthritis More benefits sustained at 1 year with self-directed format</td>
</tr>
</tbody>
</table>
