

Common ICD-10 Codes: Pelvic Health

To help you identify appropriate ICD-10-CM codes to use, APTA has compiled a list of commonly used codes in pelvic health physical therapist practice. The lists are not exhaustive and are not intended to be used exclusively. It is recommended that you check in the ICD-10 Alphabetic Index and Tabular lists to ensure there is not a code with more specificity or a different code that may be more appropriate to reflect the patient's condition.

Instructions:

To best navigate the list, first download this PDF file to your computer. Then navigate the document using the search feature in the toolbar. Finally, ensure that you look at the top of each category and work down to review notes or specific instructions.

Neoplasm

The list below gives the code numbers for neoplasms by anatomical site. For each site there are six possible code numbers according to whether the neoplasm in question is malignant, benign, in situ, of uncertain behavior, or of unspecified nature. The description of the neoplasm will often indicate which of the six columns is appropriate; e.g., malignant melanoma of skin, benign fibroadenoma of breast, carcinoma in situ of cervix uteri.

Where such descriptors are not present, the remainder of the Index should be consulted where guidance is given to the appropriate column for each morphological (histological) variety listed; e.g., Mesonephroma—see Neoplasm, malignant; Embryoma—see also Neoplasm, uncertain behavior; Disease, Bowen's—see Neoplasm, skin, in situ. However, the guidance in the Index can be overridden if one of the descriptors mentioned above is present; e.g., malignant adenoma of colon is coded to C18.9 and not to D12.6 as the adjective "malignant" overrides the Index entry "Adenoma—see also Neoplasm, benign."

Codes listed with a dash -, following the code have a required additional character for laterality. The tabular must be reviewed for the complete code.
